

SPECIFICATION AMENDMENTS

Please replace the paragraph beginning on page 6, line 18 and ending on page 7, line 5, with the following amended paragraph:

Referring now to the figures of the drawing in detail and first, particularly, to Fig. 1 thereof, there is shown an outer wall 1 that has a wall thickness d_1 . Laterally above, laterally and laterally below a region surrounding a button 2, two recesses are provided in the outer wall 1, the recesses being constructed as strips 3 and 4 (see Fig. 2). The button 2 is disposed on a strip 5 that is formed between the strips 3 and 4 by the material of the outer wall 1. The button 2 has a wall thickness d_2 that is preferably greater than the thickness d_1 of the outer wall 1 and the strip 5. The thickness d_2 is preferably selected such that the button 2 projects through a second outer wall 21, shown in dashed lines and enclosing the outer wall 1 from outside, and can be conveniently actuated by a user by pressing.

Please replace the paragraph on page 8, lines 5-7, with the following amended paragraph:

The button 2 actuates an electrical button 13 or a switch of
a drive unit 20 disposed on a board 14 at right angles to the
outer wall 1 in the interior of the kitchen appliance.
